Dear Hiring Manager,

I would like to throw in my hat as an applicant for the open DevOps Engineer position. I have the analytical mind necessary to write code and the big-picture mentality to make it innovative and unique. I also enjoy overseeing projects, organising people and channelling them into areas where they can make the best use of their talents. I'm thrilled at the prospect of becoming a part of your team and placing my abilities at your service.

I began my IT career as a front-end developer at Aretocode Technologies. My first job entailed working with teams of developers to write apps with varying functionalities from mobile applications on react native and front-end for the ERP solution for schools. Collaborating with other developers honed my coding skills and taught me the value of effectively working with others and subdividing tasks to improve efficiency and ensure smooth teamwork. I then became a back-end engineer with Govocal.ai, building a highly-scalable SaaS platform for developers to prototype, build and publish voice applications for Amazon Alexa, Google Assistant, Microsoft Cortana etc. There I worked on every aspect of the software engineering lifecycle including front-end, back-end, DevOps, testing and CI/CD automation. There I also gain deep exposure to best cloud practices.

Then I moved on to Rentomojo as a Senior Software Engineer in DevOps and took care of all DevOps requirements of the company singlehandedly and also help data teams to optimize their data pipelines for better business analytics. After the short stint at Rentomojo, I moved to ShareChat Indian-made social media and video platform with over 350M monthly active users in

total. There I got to work with Google cloud and Sharechat is among the top customer of Google cloud in the whole Asia, There we build many automations and optimize the CI/CD workflow to ease the life of developers also we used to run more than 100 Kubernetes clusters to serve the needs of content-hungry Indians.

Now currently I am working with FalconX, the most technologically advanced digital asset trading platform in the world helping institutional investors to provide liquidity over crypto/digital assets. Here I take care of complete uptime, monitoring, and scalability of the trading platform along with working on automating the various manual process to help run the business smoothly.

I am honoured to have to opportunity to apply my unique set of skills to assist your organization and its clients.

Sincerely,

Shivam Gupta
